

**Removable Prosthetics**  
**Incisal Edge Dental Laboratory**

## Incisal Edge Dental Lab Focused on Outstanding Results

Incisal Edge Dental Lab is a modern dental laboratory that combines precision with efficiency. Since 1994, we have excelled at creating the most satisfying results for our dentists clients and their patients. We are committed to building excellent workflow among dental professionals and specialists through commitment to continuing education and detailed case planning assistance, resulting in the highest quality restorations.

Since not all patients can afford Implant restorations or cosmetic makeovers, removable prostheses can be used to provide patients with an alternative prosthetic to satisfy patient function and esthetics.

Our cast partials in Chrome Cobalt, Vitallium or Titanium and advanced systems like TCS Unbreakable Denture, Valplast and Flexite provide your patients with strong aesthetically options.

At Incisal Edge Dental Lab we provide detailed estimates and treatment planning strategies. A successful procedure requires planning and teamwork and Incisal Edge Dental Lab is experienced in providing treatment planning for full mouth reconstructions. We work with our clients to help them visualize the final result before we start the procedure. And to ensure patient comfort with maximum functionality and retention, as well as pleasing aesthetics our team will support you every step of the way. From pre-treatment planning to the final insertion, you can rely on Incisal Edge Dental Lab's expertise and support.

By streamlining technique sensitive processes required for producing flexible Valplast & Flexite partials we are able to:

- Identify ideal retention areas
- Assure consistent thickness in the flexible partial
- Deliver a better fit
- Provide partials that require less chair time for the dentist and provide a better experience for the patient

### Flexite

- Monomer free
- Four standard shades
- Three ethnic shades
- Biocompatible
- Absorbs shock, unlike conventional acrylics
- Complete dentures.
- Partial dentures, TMJ, Bruxism, and Anti-snoring applications

### Valplast

- Delicate and light weight partials for patient comfort
- Flexible yet unbreakable and time tested partial
- Made of translucent plastic for a natural appearance

### Vitallium - 2000 Plus

- Premium chromium alloy, Beryllium and Nickle free
- Exceptionally strong and lightweight
- Because of its strength and light weight, the partial can be smaller and more comfortable

- Superior fit and function for a natural feel and comfort
- Biocompatible

### Titanium

- Pure implant quality titanium allows for the creation of the lightest structures
- Low thermal conductivity
- Free of metallic taste
- It weighs only a quarter of a gold alloy
- Can be used for Cast Partial Frames, Crown & Bridge and Implant Substructures.

### Cosmetic Removable - Appliance

- Range of colour tone acrylics which replicate the natural gingival appearance
- Strength and durability

### BPS

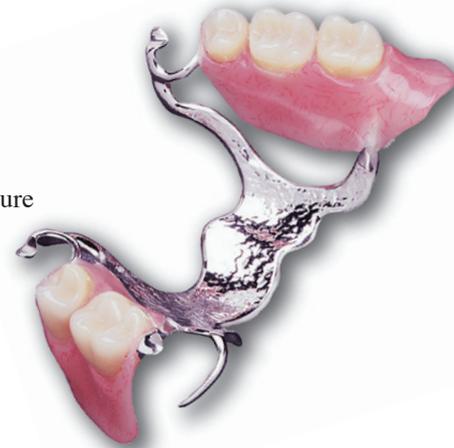

- Accuracy of reproduction based directly on patient's data
- Better fitting denture because of SR Ivocap continuous injection system
- Ivoclar Vivadent or Vitpan denture teeth can used with this system, to offer a wide range of aesthetic options to create natural looking restorations

### Conventional Denture Systems

- BPS Ivocap
- TCS Unbreakable Plastic Denture
- Acrylic Removables

### Partial Denture Systems

- Vitallium 2000
- Titanium
- TCS Unbreakable Plastic Denture
- Luci-Soft Material

## Implant Retained Overdentures

---

**Incisal Edge Dental Lab also provides fixed and removable Overdentures utilizing substructures that are compatible with all implant systems.**

**T**homas Kitsos, RDT, has extensive training in Misch, as well as leading implants company training. The advanced training our technicians have received allows them to support progressive dentists who offer cutting edge restorations like the Nobel Biocare all-on-four, Straumann screw retained Implant Bars and Bridges and the Marius Bridge.

Your patients can be offered confidence building smiles, using removable dentures in combination cases with crown & bridge, milled with attachments, to accept removable prosthetics.

Incisal Edge Dental Lab uses all types of precision attachments, including intracoronal, extracoronal and overdenture attachments from the leading manufacturers (Cendres & Metaux, Zest Anchors, Bredent, Sterngold and CEKA) are used to create a seamless transition between the abutment and the partial.

Accurate shade selection can be carried out to match the crowns with the partial dentures. We use quality denture teeth to the match to corresponding porcelain shade, such as Vita or Ivoclar Chromascope.

In the end our clients can rest assured that their patients will like the results they obtain - boosting the confidence and self-esteem of the patient so that they can enjoy life to the fullest.
